SUMMARY

Full Stack Developer with expertise in building scalable, "mobile-first," and pixel-perfect web applications. Proficient in the MERN stack (MongoDB, Express, React, Node.js) and Next.js, with a strong focus on developing robust RESTful APIs. Dedicated to writing clean, maintainable code and delivering high-performance user experiences.

SKILLS

Frontend Skills: React.js, JavaScript, TypeScript, Next.js, Redux, TanStack Query, TailwindCSS
Backend Skills: Node.js, Express, MongoDB, WebSockets (Socket.io), REST APIs, Redis, OOP
Tools: VS Code, Git, React Testing Library, GitHub Actions, Vercel, Figma

EXPERIENCE

Speecto Solutions **July 2025 – Sep 2025**
Full Stack Web Developer Intern *Onsite*

- **UI/UX Implementation:** Translated complex Figma designs into high-fidelity, **mobile-first** responsive web interfaces, ensuring pixel-perfect accuracy across all devices.
- **Full-Stack Development**: Contributed to both **frontend and backend tasks**, bridging the gap between design and server-side logic for real-world project requirements.
- **Security Implementation**: Owned and executed all **security responsibilities**, ensuring compliance and robust protection across products.
- **Agile Development:** Worked in an agile workflow, delivering features consistently on deadline while maintaining high code quality and scalability.

PROJECT

Leaso – P2P Rental Marketplace *GitHub ↗*
Full-Stack Solo Project

Leaso is a high-performance peer-to-peer rental platform designed to facilitate secure item sharing and real-time negotiations between lenders and renters. The application streamlines the entire rental lifecycle, from discovery and multi-role onboarding to automated digital agreements.

- **Core Infrastructure**: Architected a secure **JWT + RBAC-based authentication system**, protecting 30+ API endpoints and eliminating unauthorized access across all user roles, featuring multi-role onboarding for Individuals, Students, and Corporate users.
- **Real-time Messaging Architecture:** Engineered a high-concurrency chat system using **Socket.io** with a **"DB-First" emit strategy**, ensuring 100% message persistence and zero data loss during network instability.
- **Advanced Data Orchestration & Caching:** Designed complex **MongoDB Aggregation Pipelines** using $lookup and $group stages for multi-layered item filtering, optimized by a **Redis caching layer** to reduce database load and accelerate search analytics delivery.
- **Business Intelligence Dashboard:** Developed a comprehensive "Lender Control Center" using **Recharts** to visualize financial metrics, including total revenue, ongoing rentals, and "Rental Velocity" through real-time data streams.
- **Performance Engineering:** Optimized dashboard responsiveness and reduced data-loading latency by **40%** through **Redis** caching, **TanStack Query** background revalidation, and cursor-based pagination.
- **Full-Lifecycle Proposal Engine:** Developed a state-driven P2P request system that automates the transition from inquiry to digital agreement, integrating **Node.js EventEmitters** for non-blocking background notification processing.

EDUCATION

Bachelor of Computer Science **Sep 2022 - July 2026**
National Textile University
CGPA: 3.60/4.00
